

Channel Comparison Table

i We work really hard to provide the most suitable, simple and trusted channel integrations for SuperControllers - just one of the many ways we help self-caterers thrive. Each channel is different, and with that the integrations vary. We are constantly upgrading the integrations we have with channels, use this page to quickly compare and see, at a glance, the type of connections we have with all of our channels.

Definitions	
'Availability Only' Integrations	SuperControl sends availability to a channel, but not prices or content. These integrations are typically set-up using iCal links .
'One-Way' integrations	SuperControl sends availability to a channel and the channel sends nothing back. A 'one-way' integration can be made to work both ways through the use of an iCal link.
'Rates & Availability' Integrations	SuperControl sends (at a minimum) pricing and availability to the channel. These integrations can be either 'one-way' or 'two-way' (see above).
'Full' Integrations	SuperControl sends listing content, pricing and availability to the channel, and channel sends bookings back with (at a minimum) prices and guest details.
Default booking extras	These are booking extras added automatically to a booking, that guests can't opt out of (e.g. cleaning fee, pool fee, fuel allowance)
Maximum capacity pricing	Some sites do not accept per person pricing, your pricing will default to the maximum price you would charge. For example, you normally charge £100pn for 2 people, £150pn for 4 people and £200pn for 6 people, maximum capacity pricing will use the £200pn pricing regardless of the amount of people booking.

 In the table below, those channels that have a help centre article about the integration have a clickable 'YES' in the right-hand column.

If there is a NO in the column, the set-up instructions can be found directly on the integration page in your SuperControl account.

Channel	Integration Type	Availability	Pricing	Default Booking Extras	Discounts	Content	Special Prices
